TRIAD Construction Completes Renovations to Hart Park

West Allis, WI – Triad Construction is proud to announce the completion of renovations to Hart Park in Wauwatosa, WI. The newly completed project brings to fruition the Wauwatosa Common Council's goals for a multi-use athletic center to be widely used by the community.

To maximize community usage, Triad Construction built a state-of-the-art athletic field with the ability to accommodate football, soccer, field hockey, and lacrosse games. Additionally, the field's running track was reconstructed, with several new track and field amenities installed around it. The tennis courts were also renovated and expanded. Triad Construction outfitted the entire park with synthetic track and turf for added safety.

Because Hart Park is prone to flooding, water damage prevention was a key concern of city officials. Triad Construction addressed this need by outfitting the athletic center with a sophisticated in-ground drainage system. Porous pavement was also used to allow flood and storm-water runoff to permeate the soil and migrate back to the river, rather collecting above ground.

In order to provide a hospitable environment for community members to attend sporting events, Triad Construction built new bleachers on the field sidelines, many of which are ADA accessible. Workers also installed a brand new press box and field lighting.

"I can't thank [Triad Construction] enough for the great work," says Wauwatosa Mayor Jill Didier. "The new facility positively shines, and I know it will continue to benefit [our] community for many years to come."

This successfully completed project has allowed Triad Construction to expand its already diverse portfolio of work.

Triad Construction Inc. is a commercial construction firm organized around a team of skilled professionals. We enjoy working with clients who value relationships and are looking for a committed team to help them reach their construction goals.
